DeployGuard - Required Run Commands

Use the quick run for the verified local workflow. Use the manual terminals when keeping the application open or preparing controlled deployment verification.

1. Quick verified local run

```
cd /home/hassan-sajjad/Deploy-Guard-dev
npm run demo:normal-v1-local -- start
```

Status

```
cd /home/hassan-sajjad/Deploy-Guard-dev
npm run demo:normal-v1-local -- status
```

Stop

```
cd /home/hassan-sajjad/Deploy-Guard-dev
npm run demo:normal-v1-local -- stop
```

2. Automated FYP demo

```
cd /home/hassan-sajjad/Deploy-Guard-dev
npm run demo:fyp-local
```

3. Manual development run

Terminal 1 - PostgreSQL and Redis

```
cd /home/hassan-sajjad/Deploy-Guard-dev
docker compose up -d postgres redis
docker compose ps
```

Terminal 2 - Backend

```
cd /home/hassan-sajjad/Deploy-Guard-dev/backend
npm install
npm run migration:run
npm run start:dev
```

Terminal 3 - Frontend

```
cd /home/hassan-sajjad/Deploy-Guard-dev/frontend
npm install
npm run dev
```

Open frontend

```
xdg-open http://localhost:5173
```

4. Deployment workers

Run each worker in a separate terminal after the exact default-off gates and project/dev allowlists are configured in backend/.env.

Terminal 4 - Release worker

```
cd /home/hassan-sajjad/Deploy-Guard-dev/backend
npm run worker:normal-v1-release
```

Terminal 5 - Infrastructure plan worker

```
cd /home/hassan-sajjad/Deploy-Guard-dev/backend
npm run worker:normal-v1-infrastructure-plan
```

Terminal 6 - Infrastructure apply worker

```
cd /home/hassan-sajjad/Deploy-Guard-dev/backend
npm run worker:normal-v1-infrastructure-apply
```

5. Deployment prerequisites

```
docker info >/dev/null && \
aws sts get-caller-identity && \
terraform version
```

6. Runtime checks

```
cd /home/hassan-sajjad/Deploy-Guard-dev
docker compose ps
ss -ltnp | grep -E ':(5173|5000|5433|6379)\b'
```

7. Stop manual services

```
cd /home/hassan-sajjad/Deploy-Guard-dev
docker compose down
```

The local demo uses a non-cloud fixture executor. Use the manual application and configured workers for controlled AWS deployment verification.
